challenges in software testing.

* communication issues :-

communication problem can occur between the development team and testing team.

there might be misunderstanding about the requirement or about the features that need to be tested.

* lack of resources :-

this can include both human resources and software resources.

the software might need tested on different platform.

there might be not enough testers or might not be enough testing tools.

* time constraints :-

there might not be enough time to thoroughly test the software before its deadline.

* missing documentation.

* lack of traceability between req. & test cases.
